

THYSOL®

CureTape®

The Medical
Kinesiology Tape
for professionals

CureTape® is constructed of a high-quality cotton base that provides elasticity characteristics similar to those of human skin. The tape is acryl adhesive, hypo-allergenic backing, in wave-form and allows the skin to breath.

The tape is air- and water-permeable, while still being water resistant. Due to these characteristics, once fixed in place, the tape can be worn for several days (4-5 days). CureTape® is developed for medical professional use only and is a medical class 1 device. The CureTape® product portfolio consists furthermore of scissors, books and DVD's, several marketing materials, roll dispensers and taping sprays. Visit the CureTape® website: www.curetape.com

VetkinTape®

The Veterinary
Kinesiology
Tape

THYSOL teamed up with veterinary professionals to develop a special tape for animals, giving the same results as CureTape®, but then exclusively for animals. In most cases the results obtained with the use of CureTape® can also be applied to animals.

The tape needs to be slightly different due to the differences in skin/ hair, muscles structure and anatomy. VetkinTape® may only be used by veterinary professional users who have had training in the special kinesiology-based taping technique.

VetkinTape® differentiates compared to current (human) kinesiology tapes available on the market with; glue used, flexibility of the tape, thickness and size of the tape. Visit the VetkinTape® website: www.vetkintape.com

M.T.C.

**Learn from
the Masters**

The MTC's philosophy: high-quality medical devices need high-quality training and education. Without proper instructions the products will not be used to their full potential. We believe that only professionals with the right background, training and education should use medical device products. That's why MTC uses the statement 'Only for professionals' in their communication.

Due to the different medical specializations, THYSOL has developed MTC courses for different specializations for human and veterinary professionals.

THYSOL has been offering Medical Taping Courses (MTC) worldwide for more than 15 years. The courses are independent, locally accredited, courses (CME) and are offered in more than 60 countries.

CrossLinq®

**The Patch to
balance the
human body**

CrossLinq® patches adjust the balance of the human body, applicable to the muscles, acupressure, acupuncture points and trigger points. The therapy is used for pain relief and applied directly to the painful areas or the acupuncture points that trigger pain.

CrossLinq® patches are adhesive, water resistant, non-elastic and the possibility of skin irritation is minimized through the use of a hypoallergenic medical adhesive. CrossLinq® comes in three formats; small, medium and large. Visit the CrossLinq® website: www.cross-linq.com

THYSOL GROUP BV

Own production and R&D facilities

THYSOL is a global leading producing medical tape company who provides a total medical taping concept, with high quality innovative products and services distributed via our close connected partners in the local markets. THYSOL's headquarter is based in Enschede, The Netherlands and the production and R&D facilities in Seoul, Korea. We introduced the well-known kinesiology tapes, which we currently produce under the brand name CureTape®, in the early 1990's as one of the first companies in Europe. THYSOL has state-of-the-art production and R&D facilities which comply with all international required certificates. Due to these facilities we are able to cooperate with leading multinationals and able to produce our products as "medical device class 1"

THYSOL is producing, marketing and selling medical products for mainly the professional medical industry and by doing so, controlling the complete value chain. THYSOL is among the very few that produces their own tapes in their own facilities. This allows THYSOL to control quality, steer production and develop new products.

THYSOL's four pillars, the international brands, are the foundation of the company;
CureTape®, a medical human tape
VetkinTape®, a medical veterinary tape
CrossLinq®, acupuncture or trigger point patches

MTC®, the education institute offering specialized courses and workshops
THYSOL is currently active in more than 60 countries via distributors, who offer our portfolio and organize MTC courses. Furthermore, we cooperate with several universities and R&D institutes.
